DrugShift-UQ: hypothesized cross-gated interaction architecture
Cancer cell-line expression
Fold-fitted selection + scaling
Drug molecular fingerprints
Train-only feature selection
Cell encoder
64-dimensional learned embedding
Cross-gated interaction
Reciprocal gates + low-rank bilinear
Drug encoder
64-dimensional learned embedding
Residual fusion head
Ensemble log(IC50) prediction
Held-out calibration
Absolute / ensemble-scaled intervals
Shift-aware calibration
Training-entity feature distances
